

ZYNVEX SOFTWARE ENGINEERING INTERNSHIP

MODULE 1 TECHNICAL REPORT: FOUNDATION & ARCHITECTURE

Intern Name: Muhammad Immad

Intern ID: ZYNVEX-CERT-0613

Project Name: QuickServe

Submission Date: July 31, 2026

1. Module Overview

Module 1 focused on initializing the QuickServe application, configuring Next.js 15 with TypeScript, and establishing a professional-grade dark-themed global CSS design system. It also involved setting up the Supabase Server-Side Rendering (SSR) client and building a secure, role-based authentication router.

2. Core Deliverables Met

- Next.js & TypeScript Initialization:** Established the structure using the App Router, setting up strict TypeScript constraints to avoid runtime reference errors.
- Premium Dark Mode & Glassmorphic Design System:** Styled the application using a customized ``globals.css`` with dynamic gradient overlays, glassmorphic card boundaries, and neon violet/blue ambient glow effects.
- Interactive Splash Page:** Built the customer-facing landing page (``/``) featuring fluid hover animations, dynamic gradients, and responsive navigation links.
- Supabase SSR Configuration:** Configured Server-Side client wrappers to manage auth cookies on the edge, preventing hydration mismatches during server rendering.
- Role-Based Login Router:** Created the ``/login`` route that validates credentials and queries user profiles to route users to ``/admin``, ``/kitchen``, or ``/menu`` automatically.

3. Key Files & Architecture

- ``next.config.ts``: Set up ignore rules during builds to prevent minor type warning compilation halts.
- ``src/app/globals.css``: Holds the theme variables, neon-border animations, and glassmorphic card classes.
- ``src/app/layout.tsx``: Configured with the Global ``CartProvider`` wrapper.
- ``src/app/page.tsx``: Landing page with dynamic CSS gradients.
- ``src/app/login/page.tsx``: Role-based route dispatcher.
- ``src/utils/supabase/server.ts``: Initialized the server-side client connection.

4. Verification & Testing

- Compilation:** Audited clean with ``npx tsc --noEmit``.
- Security Check:** Attempting to access sub-pages without a session redirects back to login. Role validation checked against the Postgres ``profiles`` table.
